

# SANITRADE®

High technological content's systems

Take control of the air you breathe, improve your health with air quality knowledge and forecasting

## WITH **SANICLEAN**

A disinfection / sanitization system for the disinfection / sanitization of a vacuum health system and / or the environment surrounding the vacuum health system.

By eliminating everything that carries bacteria and viruses

check the air quality and the amount of ozone after using SANICLEAN

# DESCRIPTION

Device for internal sanitation of a toilet by means of automatic air \ ozone mixing by dragging air ozone from the washing water system.

The ozone production device is activated by a pneumatic impulse given by a push button, the impulse activates a microswitch that feeds the ozonator, the air is sucked by a micro ejector placed on the washing water line which mixes with ozone and proceeds disinfection of wet surfaces.

# ADVANTAGES

- ✓ Immediate disinfection of wet and dry surfaces by contact with ozone
- ✓ Immediate sanitation of the air in the toilet area
- ✓ Important odor elimination
- ✓ Elimination of pathogens
- ✓ Quick dissolution in the environment

**Subject of a patent issued by the  
Ministry of Economic Development**

*Ministero dello Sviluppo Economico*

# SANITRADE®

High technological content's systems

# WHY USE SANICLEAN

The system can be applied **to all vacuum toilet** models both in the assembly phase of new toilets thanks to the small size and direct connections, and in the updating phase for installed toilets.

The hydraulic and electrical wiring of the system is very simple, it is necessary to intervene on the toilet washing supply line and electrically power the **ozonator** arranged in a special box.

No placement constraints

No power supply to the toilet

Power supply suitable for the voltage available on board.

Disinfection with **Ozone O3** is among the most reliable and effective solutions on the market today.

Ozone O3 is rapidly dissolving and does not involve polluted residues

The solution with O3 is easy to control and immediate reactivity.

No polluting traces are left or released on surfaces and in the environment.

To the good reasons above, we can once again highlight the easy implementation of the system.
