High technological content systems

**A new SANITRADE product will soon enter in the market!**

A new Sanitrade product will soon enter the market!

**SANIFOODWASTE 2SSH130** type a **true innovation** with **technology** and **patents** of Sanitrade for the treatment of food waste. Sanitrade is proud to inform you that all the preliminary tests performed on the SANIFOODWASTE machine are giving extremely satisfactory results

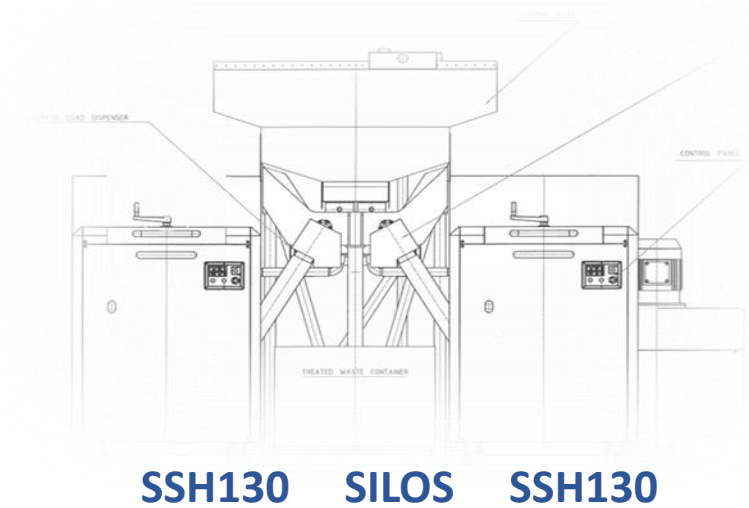

**SANITRADE**<sup>®</sup>  
High technological content's systems

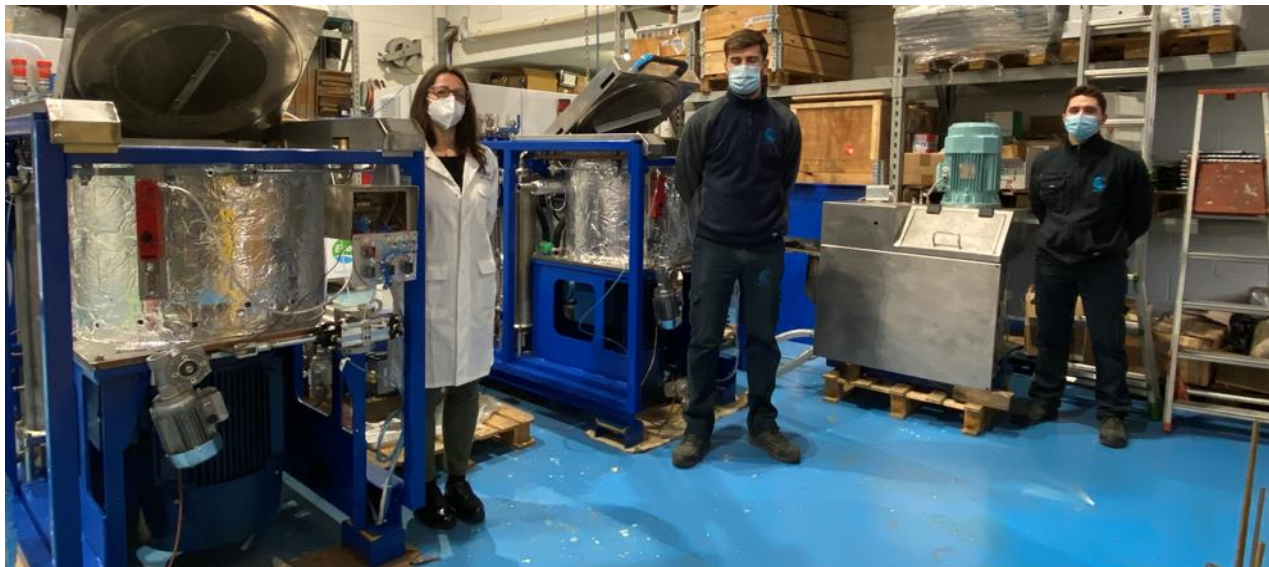

The performances of the cold shredding and relaunching system are extremely satisfactory, very limited addition of water and performance of over 500 kg/h of treatment.

The automatic loading of the feed silo allows satisfactory distances between the pulper and the 2SSH 130s by loading an intermediate silo.

The two automatic loading systems of **the SSH130** rotary presses allow a correct and calibrated loading of the same for a precise treatment that meets the requirements obtained from the chemical-physical analysis of the product before and after treatment.

## SANIFOODWASTE

WASTE

INTERMEDIATE STEP IN SILOS

The treatment allows a decidedly excellent final result, stable material, odorless, **reduced in weight to 30% and in volume to 20%** in accordance with the scientific analyzes carried out in the scientific experimentation phase.

SSH 130

70% weight  
reduction  
80% volume  
reduction

FINAL STEP AFTER SSH130

The automation part allows you to record, manage and monitor operation and parameters on site and / or remotely.

In February the first unit will be delivered, it will be installed and tested to confirm the excellent results.
